### Bio:

**Cecilia** began her career in Canada as a Developmental Psychologist specializing in children's learning from early years to secondary school. She then moved to the UK and trained as a KS1 Teacher and a KS2 Teacher in Mathematics applying Piaget's cognitive development theory when working with the children in her class. The study of human behaviour continued and she gained qualifications as a Psychotherapeutic Counsellor working with young adults as well as adults as a Cognitive Behaviour Therapist marrying the foundation learned as a psychologist with its application as a counsellor.

**Abstract:**

**A Boring Lesson vs A Fun Lesson**

There have been many studies done on the learning preference of students. There have also been many studies done on the importance of differentiation within lessons. It is a very daunting task for teachers to prepare for the 5 or 6 lessons a day in different subject areas when considering preferred learning styles and differentiation. Sometimes it is easier to prepare worksheets and consider only differentiation rather than to have to consider preferred learning styles as well. This scenario more often results in 'a boring lesson'.

My webinar will attempt to offer strategies that will raise 'a boring lesson' into 'a fun lesson'.
